

# Categories

Categories are grouped by type and origin:

- Builtin Categories
- Console Categories
- ACL Categories
- Parent Categories

Click one of the Category Types displayed in the DrawBridge, and refer to the relevant section below for further information.

## Builtin Categories

Classifier categories provided by the Redwood project.

Classifier categories contain both URL and phrase patterns, operating on both HTTP Request and ResCategories are grouped by type and origin:

- Builtin Categories
- Console Categories
- ACL Categories
- Parent Categories

Click one of the Category Types displayed in the DrawBridge, and refer to the relevant section below for further information.

## Builtin Categories

Classifier categories provided by the Redwood project.

Classifier categories contain both URL and phrase patterns, operating on both HTTP Request and Response. The patterns in Builtin Categories are managed by Compass and are not visible in the DrawBridge.

A list view is provided of all the included Categories. Click an individual Category for more information.

# Record View

A Built-in Category contains the following parameters:

Parameter	About
Parent	The parent Category of this record; see Parent Categories, below
Rating	The Classifier Rating assigned to this Category. See <b>Content Filter: Overview and Essentials</b>
Description	Display Name of the category
Status	This record is <input type="button" value="Active"/> or <input type="button" value="Inactive"/>
Tenancy	Visibility in the DrawBridge ecosystem. See <b>Essential Concepts: Record Model - Tenancy and Hierarchy</b>
Canonical ID	The globally-unique identifier for this record
Synchronized	Indicates if this record is handled by Synchronization: <input type="button" value="Yes"/> / <input type="button" value="No"/>
Type	Displays the type of this record: <input type="button" value="Builtin"/> / <input type="button" value="Console"/> / <input type="button" value="ACL"/> / <input type="button" value="Parent"/>
System-wide Action	The default action assigned to this Category on this DrawBridge
Block Invisibly	Sets whether a Block page is returned (or not) when this Category is set to Block

Record header buttons:

## Console Categories

Locally managed Classifier categories created on the DrawBridge.

Classifier categories contain both URL and phrase patterns, operating on both HTTP Request and Response.

## ACL Categories

Locally managed ACL categories.

ACL Categories only contain rules that match URLs, and therefore operate only on HTTP Requests.

# Parent Categories

Parent Category list, grouping categories into genres.

The only purpose of Parent Categories is to make it easier for people to navigate the category lists. The patterns in Builtin Categories are managed by Compass and are not visible in the DrawBridge.

A list view is provided of all the included Categories. Click an individual Category for more information.

## Record View

A Built-in Category contains the following parameters:
