Add a Daystar account to Mail on Mac

1. Launch the Mail application on your Mac.
   - If you have no email accounts set up, Mail will prompt you to add an account when you first launch the application. Select **Other Mail Account...**, then click **Continue**.
   - If you already have email accounts in Mail, you can add your Daystar account by choosing **Mail > Add Account...** from the menu bar in Mail. Select **Other Mail Account...**, then click **Continue**.
2. Enter your Daystar account information and select **Sign In**.
3. Mail will display a settings dialog box with an error message "Unable to verify account name or password."
4. In the User Name field, enter your full Daystar email address.
5. Ensure that the Account Type is set to IMAP.
6. In the Incoming Mail Server field enter `imap.daystar.io` and in the Outgoing Mail Server field, enter `smtp.daystar.io`, then select **Sign In**.
7. Uncheck the box next to Notes, then click **Done**. Your email account is now set up and ready for use.

Email Address:	example@daystar.io
User Name:	example@daystar.io
Password:	•••••••

Account Type:	IMAP
Incoming Mail Server:	imap.daystar.io
Outgoing Mail Server:	smtp.daystar.io

Unable to verify account name or password.
